Since the day I discovered how much I'm passionate about learning new things every day, solving problems and to create ideas I've decided to be an engineer. Environmental engineering discipline always enlarge my vision so that I can be more aware of the Earth and its problems. By taking many of the project courses I had the chance to build new ideas in many cases and learned to be an effective teammate.

Being multi-disciplinary is the most important thing to be an engineer and by learning new languages, reading research papers in many subjects, communicate with other people from various disciplinary and culture, I'm trying to be a better engineer.
